

- Download the latest version from here:
- <https://maven.apache.org/download.cgi>
 - [Download the Binary zip archive (-bin.zip)]
- Extract the zip into C:/Program Files *(or anywhere else you want to install it)*
- Add a new SYSTEM environment variable called 'MAVEN_HOME' that points to your new maven folder as per the example shown below:

- Edit the 'Path' system variable and add the following:
`%MAVEN_HOME%\bin`
- Close all open command prompts and then open a new one. Then type: `mvn -v`
 - It should now show the maven version confirming that it is installed and ready to be used.
